

Workshop on Modelling Science - Amsterdam

By: Ken Bikoff

Oct 05, 2009

SLIS Professor [Katy Börner](#) (CNS), and colleagues Peter van den Besselaar (SSA) and Andrea Scharnhorst (VKS) are the organizers of a workshop that will be held in Amsterdam, The Netherlands on October 6-9, 2009. All three are also part of the programme committee, and will be presenting research. The workshop will be held at the Royal Netherlands Academy of Arts and Sciences headquarters, and at the International Institute of Social History - both in Amsterdam.

Organizers: Katy Börner is the Director of the [Cyberinfrastructure for Network Science Center](#) (CNS) at SLIS. Peter van den Besselaar is with the [Science System Assessment](#) (SAA) department of the Rathenau Institute. And, Andrea Scharnhorst is with the [Virtual Knowledge Studio](#) (VKS).

[Workshop on Modelling Science - Understanding, Forecasting, and Communicating the Science System](#)

"The aim of this workshop is to bring together different approaches of modelling and visualizing the science system (including the social sciences and humanities). During the last forty years, a variety of explanatory, exploratory, and metaphorical models of the science system have been used in a number of different fields. As a consequence, this topic appears at very different conferences on agent-based modelling, social simulations, network models or cybernetics. At this workshop we will bring together different models of science.

Exchange and diffusion

By integrating empirical data, visualization and modelling standards and tools, and different modes of interpretation and critical reflection, the workshop will provide an international opportunity for the exchange and diffusion of this expert knowledge about the inner dynamics of scholarly activities in a variety of fields.

We are determined to use this workshop to mobilize the new possibilities to measure and visualize scholarly activities as points of departure for more advanced explanatory tools (quantitative as well as qualitative). Within the domain of possible explanations of the dynamics and mechanisms of knowledge production, we will concentrate on exploring the potential of mathematical models and simulations.

Critical mass

The workshop aims to act as catalytic event and to initiate a new mode of systematic study of "models of science" by bringing together a 'critical mass' of experts from different fields. The workshop will build on the rich scholarly landscape in the Netherlands of studying science and scholarly activities. By bringing together the experts on modelling, measuring, visualizing, and analyzing scholarly activities, we aim to gain new insights into basic mechanisms of scholarly activities and to explore the limits and possibilities of modelling for explanation and forecasting

for explanation and forecasting.

This colloquium also functions as a starting point for the further development of computational practices in science studies. The workshop will be the platform for the launch of a novel interdisciplinary discourse on modelling science and contribute to e-research efforts at the boundaries between natural, computer and information sciences and social sciences and humanities."

Programme committee

Peter van den Besselaar,
Edwin Horlings (SSA),
Andrea Scharnhorst,
Paul Wouters (VKS),
Katy Börner (Indiana),
Loet Leydesdorff (UvA),
Wolfgang Glaenzel (Leuven),
Renaud Lambiotte (London)
